## MP Rotator Water Schedule

Theisen Sprinkler and Landscape Company consistently strives to provide the most cutting edge technology in our landscape and irrigation installations. Recently we began installing what we believe to be the most state of the art irrigation equipment, the **MP Rotator**. The MP Rotator® is a revolutionary sprinkler that sets a new standard for water efficiency in the turf & landscape industry. The MP Rotator's low application rate helps to significantly control runoff on slopes and tight (clay) soils. The multi-trajectory, wind-resistant, rotating streams provide unmatched uniformity and outstanding close-in watering, preventing the need for lengthened irrigation cycles to compensate for brown spots. You can read more about this technology at <http://www.mprotator.com/>.

Because the MP Rotator applies the water more slowly, you will need to set your controller to water for longer periods on these zones when compared to other irrigation equipment. **Typical application is as follows.**

**New Sod-** Water three times per day for 25 minutes (We recommend 7am, 11am, and 3pm)

**Established Sod-** Water two times per day for 35 minutes every other day (We recommend 6am and 6pm start times) If your water district requires watering on specific days, please schedule to apply water for 3.75 hours per week. This schedule is based on maximum run times during the hottest part of the summer (late June through August)

You may need to adjust this schedule based on you actual on-site conditions. If the area appears too wet with this schedule, please adjust the schedule down in 10% increments (reduce the run time by 3-4 minutes) until you get the correct amount of water on the grass. Similarly- if you have dry areas of grass you may need to add a few minutes to the water schedule. **Proper head adjustment should be addressed before any time adjustments are made to the controller.** There is an adjustment tool required for adjusting these heads. We generally leave instructions and the head adjustment tool by your controller at the time of installation. If you would like an additional tool, we can mail you one or we do offer the service of irrigation and landscape maintenance.

**MP ROTATOR®**

\*Please see our website: [www.qualitysince1959.com](http://www.qualitysince1959.com) for **special offers & maintenance information.**
